1	<ol> <li>A printmode for an inkjet printer including a plurality of print nozzles</li> </ol>
2	and an edge guide projecting into a printzone into which at least one of the
3	plurality of print nozzles may be transported for deposition of a fluid onto a print
4	media, the printmode comprising a printmask defining a print disable zone
5	including a pre-selected area of the printzone substantially equal to an area of
6	the edge guide that projects into the printzone.

- 2. A printmode according to Claim 1 wherein the print disable zone further comprises an area of the printzone substantially equal to a length of the edge guide times a width of a print media.
- 3. A printmode according to Claim 1 wherein the print disable zone further comprises an area of the printzone substantially equal to a length of the edge guide times a width of a portion of the print media that lies beneath the edge guide.
- 4. A printmode according to Claim 1 further comprising the printmask defining a narrow margin print zone located adjacent to the print disable zone.
- 5. A printmode according to Claim 4 further comprising the printmask defining a graduated print zone located between a narrow margin print zone and a full image density print zone.
  - An inkjet imaging device comprising:
     a printer controller;
- a media transport assembly connected to and controlled by the printer controller for transporting a print media along a media travel direction;
  - a printhead including a plurality of print nozzles, the printhead connected

6	to and controlled by the printer controller for controllably activating the print
7	nozzles to eject drops of ink, the printhead connected to a carriage for
8	transporting the printhead across the print media;
9	a printzone defined by a height of the plurality of print nozzles and the
10	width of the print media;
11	an edge guide located adjacent to a marginal edge of the print media, the
12	edge guide located in the printzone; and
13	a printmode including a printmask defining a print disable zone including a
14	pre-selected area of the printzone substantially equal to an area of the edge
15	guide that projects into the printzone.
1	<ol> <li>A printmode according to Claim 6 wherein the print disable zone</li> </ol>
2	further comprises an area of the printzone substantially equal to an aggregate
3	length of the edge guide times a width of a print media.
1	8. A printmode according to Claim 6 wherein the print disable zone
2	further comprises an area of the printzone substantially equal to a length of the
3	edge guide times a width of a portion of the print media that lies beneath the
4	edge guide.
1	9. A printmode according to Claim 6 further comprising the printmask
2	defining a narrow margin print zone located adjacent to the print disable zone.
	,
1	10. A printmode according to Claim 9 further comprising the printmask
2	defining a graduated print zone located between a narrow margin print zone and
3	a full image density print zone.
1	11. A method for narrow margin printing with an inkjet printer including
2	the steps of:
3	selecting a printmode including a printmask defining a print disable zone
4	including a pre-selected area of the printzone substantially equal to length of the
5	edge guide times a width of a portion of the print media that lies beneath the

edge guide;

transporting a print media into a printzone defined by a height of the plurality of print nozzles and a width of the print media; and

selectively depositing ink from the print nozzle to the media forming an image including a narrow margin by printing in a narrow margin mode only in those marginal areas that are not occupied by the edge guide.

- 12. A method for narrow margin printing according to Claim 11 wherein the step of defining a print disable zone further includes defining an area of the printzone substantially equal to a length of the edge guide times a width of a print media as the print disable zone.
- 1 13. A method for narrow margin printing according to Claim 11 wherein the step of defining a print disable zone further includes defining an area of the printzone substantially equal to a length of the edge guide times a width of a portion of the print media that lies beneath the edge guide.
  - 14. A method for narrow margin printing according to Claim 11 further including the step defining a narrow margin print zone located adjacent to the print disable zone.
    - 15. A method for narrow margin printing according to Claim 11 further including the step defining a graduated print zone located between a narrow margin print zone and a full image density print zone.
